A results-oriented full-stack engineer with ~5 years building data-intensive enterprise platforms — from Excel-based rate-card ingestion pipelines and costing engines to large-scale simulation and alerting systems for global supply-chain operations. Strong across Node.js, Vue.js and PostgreSQL, with a focus on performance optimization and integrating LLM and AI capabilities into production.

PROFESSIONAL EXPERIENCE

Quaking Aspen Pvt Ltd

Chennai, TN

Software Development Engineer I, Freehand

Jan 2026–Present

- Integrated an LLM-powered layer generating natural-language insights on rate-card comparisons — top increase/decrease lanes, weighted-average changes, lane-count deltas and attribute shifts — streamed asynchronously to keep the view non-blocking.
- Built a configurable role-based alert system for system activities with cadence rules and validity-group deduplication, delivering email alerts and an action-required notification centre with badge counts and audit trails.

Quaking Aspen Pvt Ltd

Chennai, TN

Software Development Engineer I, Pando

Sept 2023–Jan 2026

- Developed end-to-end view and action features — including paginated data lists and side-by-side record comparison — for an enterprise supply-chain SaaS platform serving a Tier-1 US company.
- Developed a validation layer that processed raw contract and contract data from Excel files, enforcing duplicate, data-type and mandatory-field checks before ingestion, and built an error-reporting view that flagged invalid cells directly on the uploaded file.
- Built a configurable User-defined Data Manager for bulk import/export with schema-based field mapping, server-side validation and batched processing, plus a migration API that adds/updates columns via migration files without table drops or data re-ingestion.
- Developed an LLM-powered Costing Formula generation module and optimized its SQL queries using indexes and CTEs (common table expressions) for improved query performance.
- Built data-transformation routines that converted raw contract data extracted from Excel into structured records, and added a feature to extend contracts directly from the expiry view.

BYJU'S – The Learning App

Bangalore, KA

Software Engineer

Jun 2021–Sept 2023

- Built a batch job for bulk credit-note generation and verification of sales returns using JavaScript, AWS Batch, MongoDB and Postgres, generating and maintaining 500+ credit notes per day.
- Built a One-on-One web application (PERN stack) for employees and managers to track meetings, goals and action items, plus MERN dashboards and list/detail pages with automated reports to monitor credit notes and SAP data flows for the finance team.
- Delivered the SAP integration using SOAP endpoints for two-way data sync between SAP and internal systems, and migrated data from MongoDB (NoSQL) to Postgres (SQL).
- Contributed to projects from scratch using pair programming and Agile, leading sprint prioritization, planning and JIRA board maintenance.

EDUCATION

KUMARAGURU COLLEGE OF TECHNOLOGY

Coimbatore, TN

Bachelor of Engineering - CSE (GPA: 9.11/10)

2017–2021

PROJECTS

- **LLM Guardrails Middleware** - A published NPM package offering Express middleware that sanitizes LLM inputs/outputs via PII redaction, prompt-injection detection, toxicity filtering and S3-backed semantic policy rules, with a built-in policy editor UI. Built with TypeScript, Node.js, Vue.js and Transformers.
- **FinSight** - An AI-powered personal finance tracker that syncs with email to import bank statements, auto-categorizes transactions and lets users chat with their financial data through LLM. Built with Vue.js, JavaScript, Node.js and Ollama.
- **ZappyAI** - A WhatsApp-integrated AI personal assistant that manages tasks, contacts, notes and reminders through natural-language chat, using LLM-driven SQL tool calls and WhatsApp OTP authentication. Built with Node.js, Fastify, PostgreSQL (Sequelize), Vue.js and multi-LLM support (Ollama, Groq, Claude).

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, TypeScript, Python, Node.js, Express.js, Fastify, Vue.js, React.js

Databases & DevOps: PostgreSQL, MongoDB, Elasticsearch, Docker, Git/GitHub, AWS, Datadog, CI/CD, Linux

AI / ML: LangChain, LLMs, RAG, Prompt engineering, AI agents, Tool calling, Embeddings

Concepts & Collaboration: Microservices, REST API, SOAP/SAP integration, Agile, Unit Testing, Solutioning, Code review, Mentoring
